

# HVDI Management Suite

One of the biggest organisational challenges faced in business life today is IT administration. This is where the management suite comes into its own. It gives partners and customers a higher level of control of their users within a hosted virtual desktop environment so they can apply user policies directly and manage individual desktops and associated permissions on an organisational basis.

## Management in the cloud

When trusting your data and key services to a cloud provider you need tools to ensure your support organisation is in control and can take on any problem solving without being behind a 3<sup>rd</sup> party. ThinkGrid is the **worlds' first** vendor that provides a management suite which allows the IT administrator of Partner to take control of important management tasks in the cloud for their hosted virtual desktop infrastructure.

Administrators of a business or partners whom have multiple customers, can login to management suite to take control of group and global settings for their virtual desktops. Management suites are charged per "Administrator" and is provided as environment to make all kinds of administration changes and support.

## Key Features

- Configure Active Directory
- Utilise Scripts and AD features for group management
- Manage File Sharing
- Centrally manage desktops
- Lock down desktops
- Reboot, Start, Stop desktops
- View resource utilisation
- Create highly reliable and robust software deployment strategies
- Enhance security
- Troubleshoot failures
- Shadow users

## Active Directory Management

The foundation for Microsoft's identity and access management solution, Active Directory provides central authentication and authorisation services for Windows-based computers. Active directory lets you manage users and their access lists from one place.

## User Permissions Management

User identities and permissions for data access are often subject to frequent change –usually as a result of personnel changes or new services coming online within an organisation. The user permissions tools provide an easy-to-use interface for user management. New users can be registered and the setting of their permissions in under 30 seconds.

## Group Policy Management

Maintaining highly reliable and secure Windows environments in a cost-effective manner is a challenge for many organisations. Group Policies provide the ability to centrally manage your workstation and server configurations while streamlining administrative tasks and reducing IT costs.

## Routine Group Tasks

From a 30,000 foot view tackle resource utilisation, and low level infrastructure management including shadowing users, viewing processes and services and taking corrective action such as rebooting or modifying desktops in running.

## Why do I need it?

The Management Suite lets you take advantage of centralised authentication and authorisation services, simplifies user and network management and reduces IT costs while improving security. For larger organisations, it allows a comparable level of control of hosted desktop management to traditional in-house PC infrastructures

Enjoy unified control of multiple users across a Hosted Virtual Desktop deployment...
